

# IBM P-TECH Program @ Lanier Early College High School

This program consists of rigorous, educational opportunities that are connected to the area's labor market demands, particularly in line with IBM's computer and IT needs. With the help of an IBM-provided liaison, students take part in articulated ACC courses that lead to an AAS in Computer Programming by the time they graduate from high school. Students also bolster their career readiness through mentoring, work-based education and internships. Successful completion of the program ensures that students graduate with the skills necessary to be the first-in-line to interview for appropriate jobs at IBM.
